

Not taken in enough consideration is the Southern California region, its reliance and the dangers of deliveries of water being cut, paired down or contaminated.

Disaster planning should consider earthquakes, sea-level rise, flooding and sabotage.

All aspects of the effects on an urban ecosystem should be considered.

Budgetary aspects of operation and maintenance should be analyzed.

How are the new tools from Cal-Adapt or CSUSB Alluvial Fan Task Force database incorporated. Is the work of UCLA Institute of the Environment also incorporated with its mapping tools and data.
